Art Unit: 1638

1. Claims 32-33 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been placed into restriction groups.
2. Claims 26-28 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claims have not been placed into restriction groups.

***Election/Restrictions***

3. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-25 and 37, all in part, and claims 29-31 and 34-36, drawn to a plastid transformation vector encoding *merA* and *merB*, plants transformed with it, a method of using it to produce the proteins, and a method of using it to detoxify mercury.

Group II, claim(s) 1-25 and 37, all in part, and claim 38, drawn to a plastid transformation vector encoding *onr*, plants transformed with it, and a method of using it to produce the protein.

Group III, claim(s) 1-25 and 37, all in part, and claim 39, drawn to a plastid transformation vector encoding a cytochrome P450, plants transformed with it, and a method of using it to produce the protein.

Group IV, claim(s) 1-25 and 37, all in part, and claim 40, drawn to a plastid transformation vector encoding phytochelatase, plants transformed with it, and a method of using it to produce the protein.

The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-IV appears to be a plastid transformation vector encoding a protein that can remediate a contaminant.

However, Daniell (WO 99/10513, cited in the search report) suggests that sequences encoding phosphinothricinacetyl transferase, which detoxifies the contaminant phosphinothricin, by placed within his plastid transformation vectors (pg 34, lines 21-25). Thus, claim 1 among others, is not novel.

Therefore, the technical feature linking Groups I-IV is not special and the Groups are not so linked under PCT Rule 13.1.

Applicant is advised that for the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
